

71484

41342

Cloth carrying case 41345 features pockets for sampler components and brushes.

## Core Sampler Accessories

### • Treat your core sampler with a little TLC

Make your core sampler last longer with these accessories. Use the **cleaning brushes** with a mild detergent to remove filmy deposits and residue that build up on your core sampler over time. This ensures you can see your core sample clearly and take more accurate readings. Choose from 6- or 8-ft models.

The sturdy cloth **storage/carrying case** lets you take your core sampler with you and store it out of the elements. It also helps you keep your sampler parts together.

DESCRIPTION	STOCK #	EACH
Brush, 8-ft (for Core Samplers 1 1/4" Dia or More)	71484	\$
Brush, 6-ft (for Core Samplers 1" Dia or Less)	41342	
Cloth Storage/Carrying Case	41345	

## Raven CORETAKER MAX® Septic Tank Samplers

- Available in 5' and 8' lengths
- Designed for septic tank and pumper truck sampling
- Heavy-duty valve assembly contains heaviest of sludges

Robust core samplers are ideal for applications requiring heavy sludge samples—great for vacuum pumper trucks, grease traps, septic tanks and wastewater sludge haulers. Large 1.5" OD tube size makes it easy to view samples.

One-piece polycarbonate tube features SS fasteners for excellent strength during sampling and longer sampler life. Dripless link-release valve assembly connects to a shepherd's hook release to take up the heaviest sludge and contain it. O-rings seal valves to the tube, preventing leaks.

Operation is simple: Set the shepherd's hook on the edge of the tube's clean end, lower the CORETAKER MAX into the process to collect a sample, and release the hook to shut the valve and trap the sample inside.

To clean, simply rinse from the open clean end of the CORETAKER MAX and flush the waste out the valve end. Because the shepherd's hook allows the valve to remain open, it can be rinsed through and into the tank.

Sludge Judge

Sludge Judge II

Sludge Judge Ultra

## Nasco Sludge Judge® Core Samplers

- Complete kits or replacement parts available

Sludge Judge samplers take accurate measurements of settleable solids in slurries that contain less than 5% solids. All units consist of three 5-ft sections for easy transport. Choose from three models.

**Sludge Judge** features a 3/4" butyrate tube. Holds approximately 3 oz per ft.

**Sludge Judge II** features a 1 1/4" butyrate tube. That's double the size of the original Sludge Judge, resulting in double the capacity—6 oz per ft.

**Sludge Judge Ultra** features a 3/4" polycarbonate tube that's treated with an ultraviolet stabilizer to reduce deterioration from the sun. This results in a durable, rigid sampler that remains strong in cold temperatures and can withstand heat up to 280°F. Sampler holds approximately 3 oz per ft.

If you have a Sludge Judge and are unsure of which model you have, see below:

- Red foot markers and black fittings = Sludge Judge
- Red foot markers and white fittings = Sludge Judge II
- Blue foot markers and black fittings = Sludge Judge Ultra

**Note:** Sludge Judge series samplers are not compatible with CorePRO® samplers.

**Shipping:** Additional handling fees apply.
