

## Grease Control Selection Guide

Fats, Oils and Grease (FOG) is a major concern in many collection systems. USABlueBook offers a variety of products that are designed to help you manage and control this problem in lift stations and sewer lines.

### Chemical Treatment

Chemical treatment involves adding a chemical into your process, like an all-natural degreaser, that directly attacks a build-up of fats, oils or grease. Use these products as a solution to an existing problem, or as a proactive maintenance program.

### Biological (Bacteria) Treatment

Biological products add bacteria to your system that consumes organic material like grease. Best used as a continuous maintenance program against future build-up of grease.

### USA BlueBook Soy Lift Station Degreaser

- Slow evaporating for extended use
- Economical alternative
- 100% natural and biodegradable; NPE free

**NPE free!**

USABlueBook Soy Lift Station Degreaser is an all-natural degreaser that coats the walls and surfaces of lift stations, keeping them free from grease accumulation. It's an economical alternative to higher priced d-Limonene degreasers. This degreaser contains a slow-evaporating soybean oil derivative, allowing it to remain on the surface longer to penetrate oils, fats and grease. The non-emulsifying formula floats on the water's surface, continually removing deposits as the water levels change.

This degreaser is completely free of NPEs (nonylphenol ethoxylates), which have been shown to negatively impact the environment. Formula is safe for bacterial actions in your waste treatment process.

**Shipping:** 55-gallon drum and quantities of 7+ of the 5-gallon buckets ship motor freight.
