

Powerful jetter ideal for clearing large lines with high water flow

General JM-2512 Typhoon™ Jetters

- Heavy-duty 2500 psi, 12 gpm triplex pump with Vibra-Pulse®

The JM-2512 Typhoon trailer jetter is ideal for clearing big lines or remote jobs far from a water source. Twelve gallons of water pulsates down the line every minute at a powerful 2500 psi to blast lines clear of grease, sediment and debris. The 200-gal holding tank carries enough water to handle remote applications where access to water is limited.

A 24-hp Honda engine with electric start powers the pump through a V-belt reducer. Two hose reels—an electric rewind jet hose reel with a 1/2" x 400' capacity featuring a variable speed controller, and a supply hose reel carrying 3/4" x 150' hose—are mounted at the rear of the unit next to the pressure gauge and output valve. Engine controls, including an hour meter, are mounted within easy reach in the lockable tool box with slide action doors just below the reels.

The Typhoon is mounted on a heavy-duty trailer rated for 3500 lbs per axle with bearing buddies. It rides on 15" radial tires with modular wheels. A splash guard at the front protects the pump and engine from road debris. Trailer features a durable powder-coated epoxy finish for added weather protection. An antifreeze system protects the unit from freeze damage.

Includes: 150'L low-pressure rubber supply hose, 250'L or 400'L high-pressure supply hose, three high-performance nozzles, spray wand and trigger, electric brakes, safety strobe light, three safety cones with holder, rear fold down stabilizer jacks, and a retractable guide arm.

GPM @ psi:	12 gpm @ 2500 psi
Engine:	24-hp Honda w/low oil shut off, electric start and V-belt reducer
Pump:	triplex w/ Vibra-pulse®
Tank:	200 gallons
Sewer hose:	electric variable speed rewind, swivel, 1/2" x 400' hose capacity
Trailer*	
Axle:	3500 lbs, DOT-rated
Brakes:	electric
Tires:	15" radial
Effective cleaning pipe sizes:	3/8" hose: 3 to 6"; 1/2" hose: 4 to 12"

Trav-L-Vac Curb and Valve Box Vacuum Systems

- Quickly and safely remove dirt, stone, debris and water from 2 1/2" curb boxes up to small vaults

No need for duckbill removal tools and air compressor evacuation! The efficiency and safety of this valve box clean-out system makes locating valve nuts quick and simple. Simply place the skid-mounted Trav-L-Vac in the back of a pick-up truck, or order an optional trailer for fast transportation to the job site.

The steel fabricated tank and frame hold 90 liquid gallons or 12 ft² of solid material. The quick latch rear dump gate makes removal of debris quick and easy. An electronic high liquid shutoff turns the engine off when the tank needs to be dumped. A 2"OD x 6'L suction wand with a cam-lock coupler and wire-reinforced vacuum hose are standard and secure to the unit when not in use.

A Roots positive displacement blower is the key to the Trav-L-Vac system. Belt driven by a 20 hp Kohler twin cylinder engine, it has the power to remove 100 gallons of water in less than 30 seconds. It features a 3-stage reusable filter, so dust and fine particles won't affect the vacuum's performance. At 345 cfm, the Trav-L-Vac can move 15,813 fpm through a 2" hose. The relief valve is set at 14" Hg and will prevent overload if air movement is reduced through the hose during operation.

Shipping: Ships motor freight.

It's easy to transport the Trav-L-Vac on your truck.
