Storz® Hydrant Converters with Caps

- Storz quick connections save time

Storz hydrant converters change 4½" NST steamer (pumper) nozzles into a 4" or 5" Storz connection. This lets you connect your hose to a hydrant with a quick quarter-turn for faster, easier connections.

These easy-to-install converters include two stainless set screws for mounting. The anti-theft cap requires a Storz wrench for removal. Both converter and cap are constructed of hardcoat-anodized forged aluminum. Custom sizes and colors are available as a special order. Contact USABlueBook for information.
