

RIDGID® SeekTech® SR-24 Pipe and Cable Locators

- Advanced Bluetooth® and GPS capabilities for precise locating
- Easy-to-follow on-screen prompts
- Store data on microSD™ card, or download to app

RIDGID's SR-24 pipe and cable locator offers precision utility locating with Bluetooth and GPS functionality. It uses omnidirectional antennas to capture the complete signal field, making it easy to acquire the signal and trace its path. Receiver displays utility position and direction for an intuitive locating experience. Audio and visual warnings indicate if the shape of the signal field is being distorted, helping you to avoid mismarking of utility position.

Built-in GPS lets you track and store location coordinates on a microSD card. Stream data wirelessly via the Bluetooth connection directly to your smartphone, tablet or high-precision GPS instrument. For maximum functionality, download the RIDGIDtrax app to your Apple® or Android® mobile device. App allows you to identify your utility type (water, gas, electric, etc.), and display depth and GPS position on a real-time map. Finished maps can be saved to the app, or exported to a .KML file for use with popular GIS programs like Google Earth™.

Includes: microSD card, manual, instructional DVD, four C alkaline batteries, marker chips, mini-B USB cable and hard carrying case.

Note: RIDGID transmitter required. Transmitters are not included and must be purchased separately (see facing page).

Intuitive display makes locates easy

RIDGID® SeekTech® SR-60 Pipe and Cable Locators

- OmniSeek™ technology provides a good signal—even in areas with poor ground conditions
- Receive any frequency from 10 to 490,000 Hz
- Simultaneously trace sondes and target lines

The SeekTech SR-60 is one of the most versatile locators available. Its revolutionary OmniSeek technology lets it locate underground utilities quickly and easily, even in areas that are congested or have poor soil conditions. It features easy-to-read mapping displays for on-screen indication of line direction and proximity, as well as continuous depth reading, signal strength, current and directional arrows.

Swinging your receiver back and forth is a thing of the past—this locator doesn't need to be perpendicular to the line. Just point the receiver toward the suspected location and the display directs you toward the target. It also indicates changes in line direction as they occur.

The SR-60 is compatible with any make or model transmitter, and will receive frequencies from 10 to 490,000 Hz. It can even simultaneously locate a sonde and your target line. The built-in speaker provides a clear audio signal, and the included clip-on speaker is perfect for use in noisy areas. Optional headphones produce directional tones that indicate which side of the line you are on (sold separately below). When not in use, the SR-60 folds neatly into its hard-shell carrying case for convenient storage.

Includes: receiver, clip-on speaker, direct-connect cables, grounding rod, operating manual, batteries and hard carrying case.

Note: Transmitters are not included and must be purchased separately. RIDGID transmitters and sondes are recommended for use with the SR-60, but the SR-60 is compatible with any transmitter make or model.

Frequencies:	10 Hz to 490 kHz
Passive frequencies:	50/60 Hz, 4 to 36 kHz
Left/right guidance	
Visual:	yes
Audio:	yes (with use of optional headphones)
Backlit display:	yes
Battery type:	four C batteries (included)
Battery life:	approximately 24 hours
Operating conditions:	-4 to 122°F
Weight:	6.0 lbs

Frequencies:	user-definable 10 to 35 kHz, 128 Hz, 1 kHz, 8 kHz, 33 kHz
Passive frequencies:	4 to 30 kHz, 50 Hz, 60 Hz
Left/right guidance	
Visual:	yes
Audio:	yes
Backlight display:	yes
Battery type:	four C batteries (included), 1.5V alkaline, 1.2V NiMH/NiCad
Battery life:	approximately 16 hours
Operating conditions:	-4 to 122°F
Weight:	4 lbs
Wireless technology:	Bluetooth® Class 1
Wireless range:	1093 yards (1000m)
GPS accuracy (average):	<8.2' (2.5m)
