SCHONSTEDT 

The top brand in magnetic locators

Improves on the iconic GA-52Cx!

Schonstedt® SPOT® Magnetic Locators

- Audio indicator and innovative sensor design deliver pinpoint accuracy
- 7-year warranty

Use this next-generation magnetic stick-design locator to detect the magnetic field of ferromagnetic objects. Similar to the iconic GA-52Cx magnetic locator, SPOT retains the “yellow stick” look, sturdy aluminum tube and simple one-handed operation, but adds in modern ergonomics, functionality and environmental performance.

SPOT determines signal strength based on the difference in the magnetic field between two sensors spaced approximately 20" apart. Select from five gain levels to adjust sensitivity for finding survey pins, markers, nails, water and gas valves, manhole covers and many other deep iron/steel objects.

An audio tone helps you pinpoint your target and determine its orientation; the tone’s pitch becomes higher as the detected signal strength increases. Audio output ranges from 30 Hz (while idling) up to 4000 Hz (over target).

Battery life is 24 hours with intermittent use. Overall length is 42.3" (waterproof up to 27"). Weighs approximately 2 lbs.

Includes: padded soft carrying case, 9V alkaline battery and instruction manual. 7-year warranty.

Schonstedt® MAGGIE™ Magnetic Locators

- Audio and visual indicators combine for pinpoint accuracy
- LCD display shows signal polarity, bar graph & battery level
- 7-year warranty

Get pinpoint accuracy and convenient one-handed operation with the MAGGIE magnetic locator. This exceptionally sensitive unit features patented HeliFlux® magnetic field sensors to detect iron and steel objects such as property markers, water lines, well casings and manhole covers. It won't respond to non-ferrous metals such as aluminum, brass and copper.

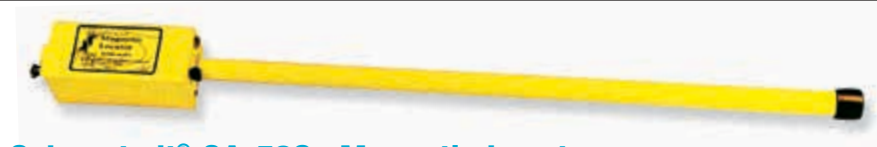

The MAGGIE locator weighs only 2.6 lbs, and all controls are thumb accessible, allowing for complete one-handed operation. The variable gain control knob lets you set sensitivity exactly where you want it.

When the MAGGIE locates an object, it provides audio and visual indicators. The audio tone increases in intensity as the locator approaches the target. The LCD display shows signal polarity, a bar graph representing relative signal strength, and battery level. While audio indication alone locates most objects, using audio and visual indicators together lets you pinpoint the target more accurately and determine its orientation.

Battery life is 24 intermittent hours on one 9V battery. Locator features high-impact ABS construction. Overall length is 32 1/2" (lower 17 1/2" is waterproof).

Includes: padded soft carrying case, 9V alkaline battery and instruction manual. 7-year warranty.

Schonstedt® GA-52Cx Magnetic Locators

The GA-52Cx features an excellent detection range for iron and steel objects—from 7 to 15 feet for property markers, water lines, well casings and manhole covers, depending on type and size. No response to aluminum, brass or copper. Only two controls: four-position sensitivity and on/off/volume.

With experience, user can distinguish between small pieces of scrap iron and actual targets. Forty hours of intermittent usage on two standard 9V batteries. Volume of 40-Hz output signal peaks when locator is positioned directly over the target. Overall length is 42.3" (lower 34.5" is waterproof). Weighs 2.5 lbs. Controls are weather protected. **Includes:** hard carrying case and batteries.
